

Lead Paint

Lead-based paint (LBP) can be present on a variety of surfaces within a property, or even under more recent paint layers.

Due to potential health issues related to ingestion of lead, it is important that property owners and developers address any lead issues and avoid EPA fines by using an experienced lead inspection and remediation company.

Using state of the art sampling and inspection techniques, **Karl Environmental Group** certified lead professionals can provide information on where lead-based paint may be present at a property, even if it is located underneath newer layers of paint.
